

Report Recipient

Patient Details
FRIMPONG, MESHACH BAFFOUR

DOB / Age:
04/12/1965 54
Ref: SPH5180620

Referring Clinician: Dr. Yorke
Referring Source: Legacy Hospital

Clinical Details: Gastric Ca for staging purpose

Examination procedure: Enhanced CT scan of the Chest on 23.06.2020

Findings:

CT scan of the chest was performed from thoracic inlet through the level of the adrenals. No prior studies available for comparison.

The lungs are well aerated without consolidation. The tracheobronchial tree is patent. There is no evidence of effusion. No nodules or significant parenchymal abnormalities are identified. Within the mediastinum there is no evidence of significant adenopathy. The adrenals are within normal limits.

Impressions:

Normal CT scan of the chest. No evidence of pulmonary metastasis.
